

## **Elevator Repairs :**

As with any machine, regular maintenance is crucial to keeping our elevators in proper working condition. Like a car, if we don't invest in upkeep, failure is inevitable. Our elevators, which have been reliable workhorses for over 60 years, require ongoing attention to ensure they continue to operate safely.

We've made significant progress, ensuring that our elevators are safe and certified for use. However, they are still machines and may experience occasional issues. Below is an update on the recent repairs:

**1. Elevator #1:**

On Wednesday, the down button malfunctioned. We replaced the button on Thursday morning, and the elevator is back in service.

**2. Elevator #2:**

We are awaiting the arrival of a part that will correct the floor display. We will provide further updates once we receive it and complete the necessary repairs.

**3. Fob Reader System:**

Break Free Technologies and Right Way Elevators are working diligently to finalize the details for integrating a new fob reader system.
